Profile

Self-taught junior developer with experience in Python automation, frontend web development and deploying services on Google Cloud Platform. I stand out for researching and solving problems independently: given a challenge, I investigate, test and build the solution. Currently studying Psychology, which gives me a user-centered mindset and strong teamwork skills. Looking for my first opportunity in development, automation or QA where I can contribute and keep growing.

Technical Skills

- **Languages:** Python, JavaScript (ES6+), TypeScript, HTML5, CSS3
- **Web and APIs:** REST API consumption, asynchronous requests (fetch), responsive design, Discord API (discord.py), asynchronous programming (asyncio), FastAPI, Next.js, REST API design
- **Tools:** Git and GitHub, GitHub Pages, Google Cloud Platform (GCP), SQLite, SQLAlchemy, pytest
- **Automation:** Python scripts, bots, permission management and automated workflows
- **Hardware and systems:** PC building, diagnostics and optimization

Projects

Quiqu.ia: Local Valorant Coach with Match Analysis

Python · FastAPI · SQLite · Next.js · REST API | github.com/qSEBASp/Quiqu.ia

- Built a full-stack application that syncs match history (HenrikDev API), computes per-match and per-round metrics (ACS, KAST, first bloods, economy) and generates an improvement report in Spanish.
- Designed a rules engine that turns metrics into prioritized findings and practice drills, with reproducible results for the same match.

- Built the REST API with FastAPI and SQLite (SQLAlchemy) and the web interface with Next.js; syncing avoids duplicates and the analysis logic has unit tests with pytest.
- Optionally integrated a language model (OpenAI-compatible API) to rewrite the reports.

EclipseBot: Dynamic Voice Channel Discord Bot

Python · discord.py · asyncio · Google Cloud Platform | github.com/qSEBASp/EclipseBot-Discord

- Developed and maintain a bot that automatically creates and manages temporary voice channels.
- Deployed it on Google Cloud Platform to keep it running 24/7.
- Designed interactive control panels and permission logic so users can manage their own channels.
- Built automatic deletion of empty channels and persistent panels that keep working after a bot restart, using real-time Discord events.

Personal Portfolio Website

JavaScript · HTML5 · CSS3 · GitHub Pages | qsebasp.github.io/mi-portafolio

- Designed and published a responsive site with semantic HTML to showcase my projects and contact details.

Education

Psychology (in progress, 2023 – present) Fundación Universitaria Areandina, Bogotá

- Training in user behavior analysis, active listening, structured problem solving and teamwork.

Self-taught software development (Bogotá)

- Independent learning in Python, JavaScript, REST APIs, Git and Google Cloud Platform, applied in personal projects.
- Courses on Platzi (Basic Algorithms and Logical Thinking, 2022; Development Environment Setup on Windows, 2022; Basic Excel, 2022; Basic Computing, 2021) and continuous learning through video tutorials, documentation and technical articles.

Languages

- Spanish: native

- English: intermediate
